

## Posters

1	W. Amin	Prediction of large deformations in fcc Metals using Crystal Plasticity-Phase Field Method
2	A. Azocar Guzman	Effects of alloying elements on the H-embrittlement of a C segregated grain boundary in alpha-Fe
3	A. Bentouaf	Structural, electronic and magnetic properties of $\text{Co}_2\text{HfZ}$ (Z = Al and Sn) Full-Heusler alloys : DFT calculation.
4	A. Biswas	Micromechanical modeling of Additively manufactured 316L Stainless steel
5	A. Chaunoyal	Atomistic simulations of deformation in lamellar TiAl alloys
6	R. Cherukuri	Study of Thermo-Mechanical Properties relationship using First-principles, Calphad, and experiments for Ni 3%X (X=Re, W, Ru) alloys
7	G. Diaz Leines	Atomistic insight into the nucleation mechanism during solidification in Ni
8	J. Engels	Parameterization of a nonlocal crystal plasticity model for lath martensite using nanoindentation
9	A. Ferrari	Martensitic transformation in Ti-Ta: an ab-initio molecular dynamics approach
10	M. Grabowski	Kinetic Monte Carlo simulations of vacancy diffusion in non-dilute Ni-X (X=Re,Ta,W) alloys
11	A. Gupta	Effect of precipitation on grain boundary diffusion in Al-based alloys
12	M. Hassani	Correlation of strain fluctuations in 3D glass and supercooled liquid
13	L. Huo	Magnetic-phase field coupling
14	Y. Ikeda	Understanding the impact the local chemical environment has on the mechanical properties of high-entropy alloys from first principles
15	J. Jenke	Construction of structure and chemistry descriptors for machine-learning material properties
16	M. Kolbe	Nucleation of a quasicrystal or multiple twinning: The case of NiZr
17	Y. Kong	Nano polycrystalline models constructed with Voronoi diagram method and phase field crystal simulations and its application in nano indentation simulations
18	Y. Liang	Nucleation in Ni-Al alloys: An atomistic study
19	Y. Lysogorskiy	Data-driven assessment of the transferability of effective interatomic potentials
20	H. Mao	Phase field crystal simulation of microstructural evolution for Al-Cu alloys during the early state of ageing

21	S. Menon	Transition path sampling of homogeneous nucleation in molybdenum
22	S. C. Pineda Heresi	Driving force and interfacial energy of carbides in the Gr3 Steel by changing the element composition
23	M. Qamar	Impurity segregation in iridium grain boundaries
24	U. Rehman	Thermodynamic calculations using OpenCalphad
25	D. Reimann	Using machine learning methods to homogenise damage from micro- to macroscale
26	M. Rinaldi	Atomistic methods for calculation of micromagnetic parameters
27	I. Roslyakova, S. Zomorodpoosh, A. Obaied, B. Bocklund, R. Otis, L. Zhang, Z.-K. Liu	Third generation CALPHAD database from 0K up to 6000K for 17 pure elements and its compounds
28	H. M. Sajjad	Micromechanical modelling of fatigue simulations using crystal plasticity and finite element method
29	I. Saleh	Micromechanical modelling of hydrogen diffusion in two phase steel
30	B. Schaefer	Micromechanical modelling of fatigue crack initiation in martensitic high strength steels
31	R. Schiedung, S. Vakili, H. Wang, F. Varnik	Phase-field-Lattice-Boltzmann Simulation of Complex Fluids
32	A. A. Schratt	Concept to describe grain boundary properties depending on the misorientation and inclination
33	S. Schulz	Massively parallel Euler-Lagrangian method for elasto-plastic materials deformation
34	D. Smirnova	Atomistic simulation of self-diffusion in bcc metals
35	A. P. A. Subramanyam	Development of analytic bond-order potentials
36	M. Tegeler	Multi phase-field load-balancing for parallel molecular dynamics simulations
37	N. Wang	The effect of spin fluctuations and atomic vibrations on the magnetic phase transition and the dynamical stability of iron at finite temperatures
38	M. Yang	Determination of the mechanical parameters of $\beta''$ in an Al-Mg-Si alloy
39	E. M. Zirdehi, M. Hassani, M. Bruns, A. E. Lagogianni, F. Varnik	Molecular dynamics simulations on polymers and glassy model systems
